

HEAT TREAT

Carburizing and Hardening with surface combustion pit furnaces for **Large Gear Treatment**.

Horsburgh & Scott has in-house gas carburizing, induction hardening, stress relieving and through-hardening to meet all of your gearing heat treat requirements. We also have resident metallurgical expertise for process design and process control.

IN-HOUSE HARDENING FOR HIGH QUALITY AND RELIABILITY

Carburizing

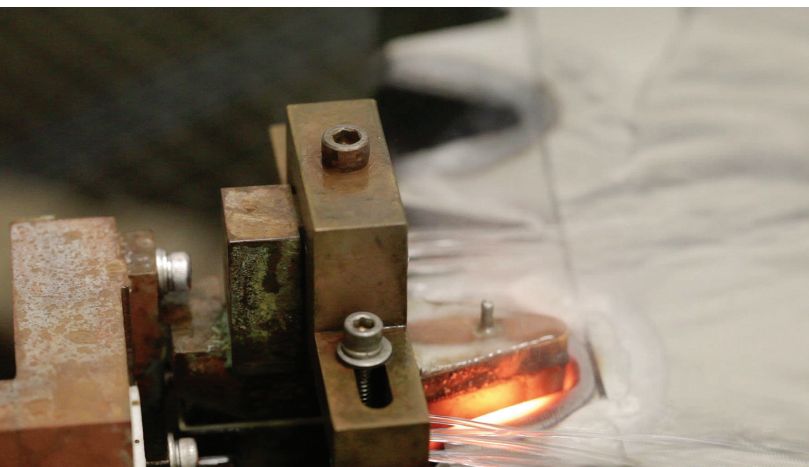

A surface heat treatment process in which iron or steel absorbs carbon when the metal is heated, with the intent of making the metal harder and stronger (3310, 4320, 4820, 8620, 18CrNiMon7, and more)

Induction Hardening

A form of surface heat treatment in which a metal part is heated by induction heating and then quenched.

Through Hardening

Carbon and alloy steels (1045, 4130, 4140, 4330v, 4340, and more) that are hardened to ranges between 200-400 BHN

Induction Hardening for stronger gears that stand up to high stress usage, increasing **Gear Life and Productivity**.
